

Bravida awarded contract by NCC to carry out electrical and pipe installations, with an order value of SEK 82 million

Bravida has been assigned the task by NCC of carrying out all the electrical and pipe installations for the new MIMO office building in Mölndal, Gothenburg. The building involves 40,000 square metres of new construction spread over 17 floors.

MIMO is located in the centre of Mölndal, close to all the services needed for everyday life. MIMO will provide, for example, the exercise facilities, healthy food options, lighting, materials, colour, ventilation and other factors that make people feel good at their workplace. The building is certified to BREEAM level Excellent, which means it is of high quality and meets high environmental targets. Bravida's contract includes the installation of electricity and pipes throughout the entire building.

“We are delighted about this assignment and about having the opportunity to continue our excellent cooperation with NCC in Gothenburg. It is a large and fine project that will become a central landmark in Mölndal. It will require good planning, with smart and cost-effective logistics solutions, to take into account tenant adaptations, and we are confident we will do an excellent job,” comments Mikael Robinson, Branch Manager of Bravida VS Installation in Gothenburg.

Henrik Bergman, Head of NCC Building Sweden, comments:

“With NCC's combined expertise and Bravida's installation experience, we will ensure project success. Bravida is a very experienced supplier of electrical and piping installations and will make a key contribution to this important project, MIMO in Mölndal.”

The installation work started during the fourth quarter of 2021 and around 16 people are involved. The project is scheduled for completion in the second quarter of 2024.
