

Bravida Denmark signs new contract with Energinet for maintenance of renewable infrastructure

Bravida Denmark has entered into a new agreement with Energinet for maintenance and inspection at eight of Energinet's offshore facilities in Denmark. The contract has a duration of eight years and an order value of DKK 94 million.

Energinet has offshore facilities that collect electricity from neighbouring offshore wind parks and convert it into a higher voltage level for transmission to shore via the national grid. Bravida's assignment includes the maintenance of high voltage systems, secondary electrical systems, cooling, ventilation and sprinklers at eight of Energinet's offshore facilities.

“We are very pleased to once again be able to support the green transition and enable the renewable energy from offshore wind parks to reach all the way to the people of Denmark. We already have a very good relationship working with Energinet in other projects and we look forward to continuing our cooperation in this offshore project,” comments Ole Høgh, Regional Manager for Region Infrastructure at Bravida Denmark.

The project started on 1 January 2025 and will run until 2033.
