

Bravida awarded installation contract for a new data center in Sweden worth approximately 850 MSEK

Bravida signs contract to carry out extensive installations at a data center in Mälardalen, Sweden, to a value of approximately 850 MSEK.

As part of the contract, Bravida will carry out installations for electrical, plumbing, ventilation and sprinkler systems. The project will be managed by PMO - Special Projects, a business area within the Bravida Group responsible for executing, managing and delivering large and advanced projects. Examples include the Stockholm Bypass (E4 Förbifart Stockholm), data centers and the expansion of the Stockholm metro system.

"We have a long-standing partnership, and I am pleased that we have once again earned our customer's trust. This further strengthens our leading position in the Nordic data center market, where we not only create more jobs but also support our customers throughout every phase of a project, from design and construction to the entire lifecycle of the data center," comments Mattias Johansson, CEO and Group President at Bravida.

The project will commence in August 2026 and is expected to be completed in December 2027.
