

Bravida takes important step towards fossil-free car fleet

Bravida has decided to significantly reduce its CO2 emissions. The goal is for 30 percent of Bravida's service cars to be fossil-free by 2025.

Bravida currently has over 6,500 cars in the Nordic region. For the past couple of years, the company has tried out various fossil-free alternatives. Now, the transition to a fossil-free vehicle fleet is intensifying.

“Every day, Bravida contributes to reducing our customers' energy consumption. Through our decision, we are setting a clear direction for our own energy consumption. There has been great progress in the development of fossil-free cars that meet the demands on loads and mileage required by our assignments. We will gradually invest in environmentally friendly alternatives to improve our car fleet and significantly reduce our climate footprint”, says Mattias Johansson, CEO and Group President, Bravida.

At the same time, we are changing the conditions for Bravida's company cars. The aim is to make it more beneficial to use environmentally friendly alternatives, thus reducing our company car emissions.
